Introduction & Platform Overview

What is RentSmart?

RentSmart is Kenya's most complete cloud-based property management platform built specifically for the way property businesses work in Kenya.

Whether you manage a single apartment block or hundreds of units across multiple owners, RentSmart gives you a single, professional platform to run your entire operation from tenant onboarding and rent collection to maintenance tracking, utilities billing, financial accounting, and team management.

The platform is M-PESA ready, Kenyan-shilling based, and designed to replace the spreadsheets, WhatsApp groups, and paper records that most property businesses still rely on. Every module is connected so when a tenant pays, the invoice updates, the balance clears, the receipt goes out, and your financial reports reflect it instantly.

> *RentSmart is not just software — it is a complete business system for property professionals who want clarity, accuracy, and control over their portfolio.*

What Makes RentSmart Different

Feature / Module	What It Does
Built for Kenya	M-PESA integration, Kenyan shilling, and workflows designed around how Kenyan landlords, managers, and agents actually operate.
All-in-One	Properties, tenants, leases, utilities, maintenance, payments, invoices, accounting, HR, and communication all in one platform. No need for multiple tools.
Role-Specific	Four distinct role setups (Landlord, Manager, Agent, Realtor) each with a tailored interface showing only what that role needs.
Tenant Self-Service	Tenants get their own portal to view balances, make payments, submit maintenance requests, and download statements reducing queries by up to 80%.
Real-Time Data	Every payment, invoice, balance, and maintenance update happens in real time, no manual reconciliation, no end-of-month catch-up.
Professional Documents	Branded invoices, receipts, statements, and lease agreements generated automatically with your company logo and colours.
Accounting-Ready	Full accounting suite including General Ledger, Trial Balance, Balance Sheet, and P&L plus export integrations with Zoho Books, QuickBooks, and Odoo.

Role Comparison: Who Gets What

RentSmart serves four distinct roles. Here is a complete feature access comparison:

How to Access RentSmart

Getting Started — Demo, Login & App Installation

RentSmart runs entirely in your browser, no installation required. Access it from any device: laptop, tablet, or smartphone. You can also install it as a Progressive Web App (PWA) for a dedicated app-like experience on your device.

Demo Links — Try Before You Subscribe

Experience each role with pre-loaded demo data before committing to a plan:

Role	Demo URL
Landlord	https://rentsmart.timestentechnologies.co.ke/demo/start?role=landlord
Manager	https://rentsmart.timestentechnologies.co.ke/demo/start?role=manager
Agent	https://rentsmart.timestentechnologies.co.ke/demo/start?role=agent
Realtor	https://rentsmart.timestentechnologies.co.ke/demo/start?role=realtor

Installing as a Mobile App

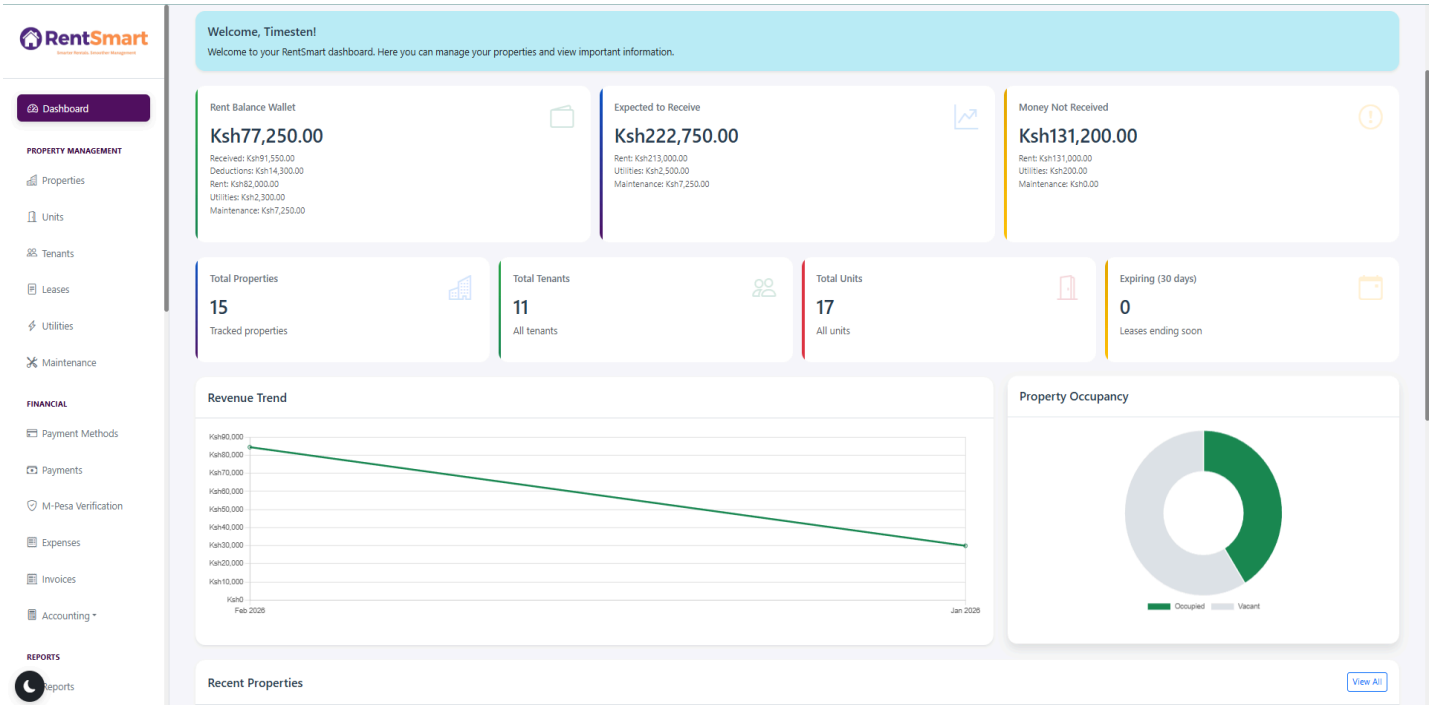
Feature / Module	What It Does
Android (Chrome)	Open RentSmart in Chrome → tap Menu (⋮) → select 'Add to Home screen' → tap Add. The app icon will appear on your home screen.
iOS (Safari)	Open RentSmart in Safari → tap the Share button → select 'Add to Home Screen' → tap Add.
Desktop (Chrome/Edge)	Open RentSmart → click the install icon in the address bar, or go to Menu (⋮) → 'Install RentSmart'.

> *The installed app loads faster, works offline for viewing cached data, and sends push notifications directly to your device — no SMS required.*

The Dashboard — Your Command Centre

Real-time overview of your entire portfolio

The Dashboard is the first thing you see when you log in. It gives you an instant, accurate picture of your portfolio's financial position without needing to open a single report. Every number on the dashboard is live, calculated from actual records in the system.



Financial Summary Widgets

Feature / Module	What It Does
Rent Balance Wallet	Shows the total cash received for the selected period, broken down into Rent, Utilities, and Maintenance. The Deductions line shows any credits or refunds applied. This is your actual money-in figure.
Expected to Receive	The total amount billed to all active tenants for the period rent charges, utility charges, and any maintenance fees invoiced. This is what should come in before any shortfall.
Money Not Received	The gap between what was expected and what was actually paid. This is your real-time arrears figure updated instantly each time a payment is recorded or a new charge is raised.

Portfolio Overview Widgets

Feature / Module	What It Does
Total Properties	A count of all active properties in your account. Click to navigate directly to the Properties list.
Active Tenants	The number of tenants currently assigned to a unit with a live lease. This is your true occupancy headcount.
Total Tenants	All tenants in the system including those who have moved out but whose records are retained for history.
Total Units	All rentable units across all properties — occupied and vacant. The difference between Total Units and Active Tenants reveals your vacancy count at a glance.

Visual Analytics

Feature / Module	What It Does
Revenue Trend Chart	A month-by-month bar or line chart showing income received over time. Use this to spot seasonal patterns, identify declining properties, and track growth.
Property Occupancy Chart	A visual breakdown of occupancy across your properties — showing what percentage of each property's units are occupied at any time.
Recent Properties	A quick-reference list of your properties with unit counts and monthly revenue figures, so you can see which properties are performing.
Recent Payments	A live feed of the latest payment entries — showing who paid, how much, and when. No need to open the full Payments module for a quick check.

Dashboard Filtering

The dashboard is fully filterable. Use the Month selector to view any historical month, or set it to 'Up to Selected' for a cumulative period view. Use the Property selector to drill into a single property's figures. Click Reset to return to the portfolio-wide view.

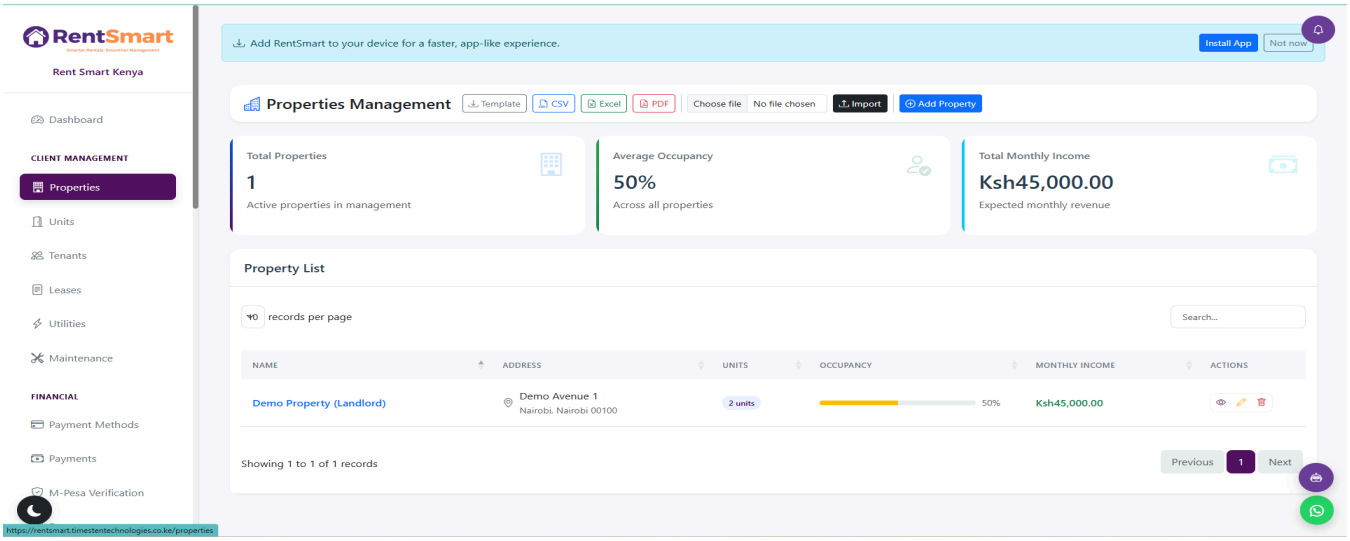
> *Pro Tip: Use the dashboard filters at month-end to generate a quick summary for each property before generating formal reports. This gives you a sanity check before you send owner statements.*

Properties & Units Management

The foundation of your rental portfolio

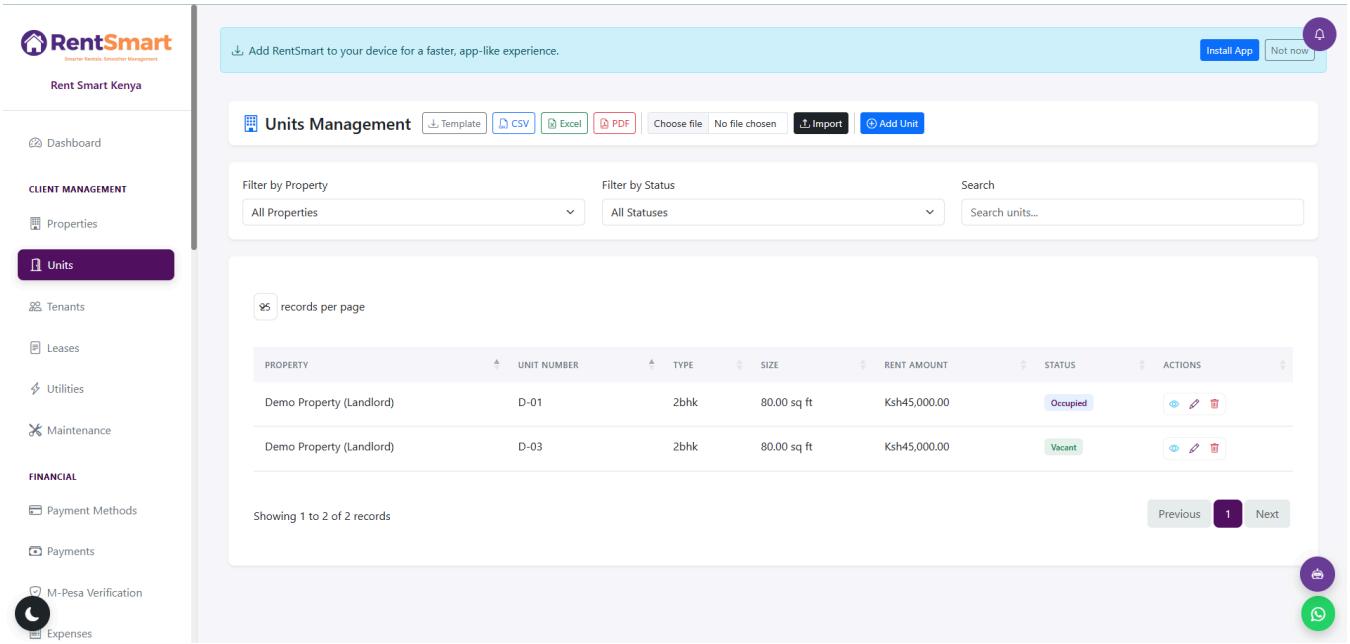
Properties and Units are the core building blocks of RentSmart. Everything else in the system tenants, leases, payments, utilities, maintenance is anchored to a specific property and unit. Setting these up correctly from the start ensures that all data flows accurately throughout the platform.

Properties



Feature / Module	What It Does
Unlimited Properties	Add as many properties as your plan allows. Each property has its own profile, dashboard, and reporting. No cross-contamination of data between properties.
Property Profiles	Each property has a dedicated profile capturing its name, address, type (residential, commercial, mixed-use), description, photos, and associated documents.
Property Type Support	RentSmart handles residential apartments, standalone houses, commercial offices, retail shops, warehouses, and mixed-use developments — all in one account.
Caretaker Assignment	Link a specific staff member to each property as the designated caretaker. This makes accountability clear and ensures maintenance assignments are directed to the right person.
Occupancy Tracking	At a glance, see how many units each property has, how many are occupied, and how many are vacant — so you always know where to focus letting efforts.
Property-Level Revenue	See the total monthly revenue generated by each property directly from the properties list — without opening individual reports.
Document Storage	Upload and store property-related documents — title deeds, insurance certificates, compliance certificates, floor plans — directly on the property profile.
Company Branding	Apply your company logo and brand colours to invoices, receipts, and the tenant portal so all client-facing communications look professional.

Units



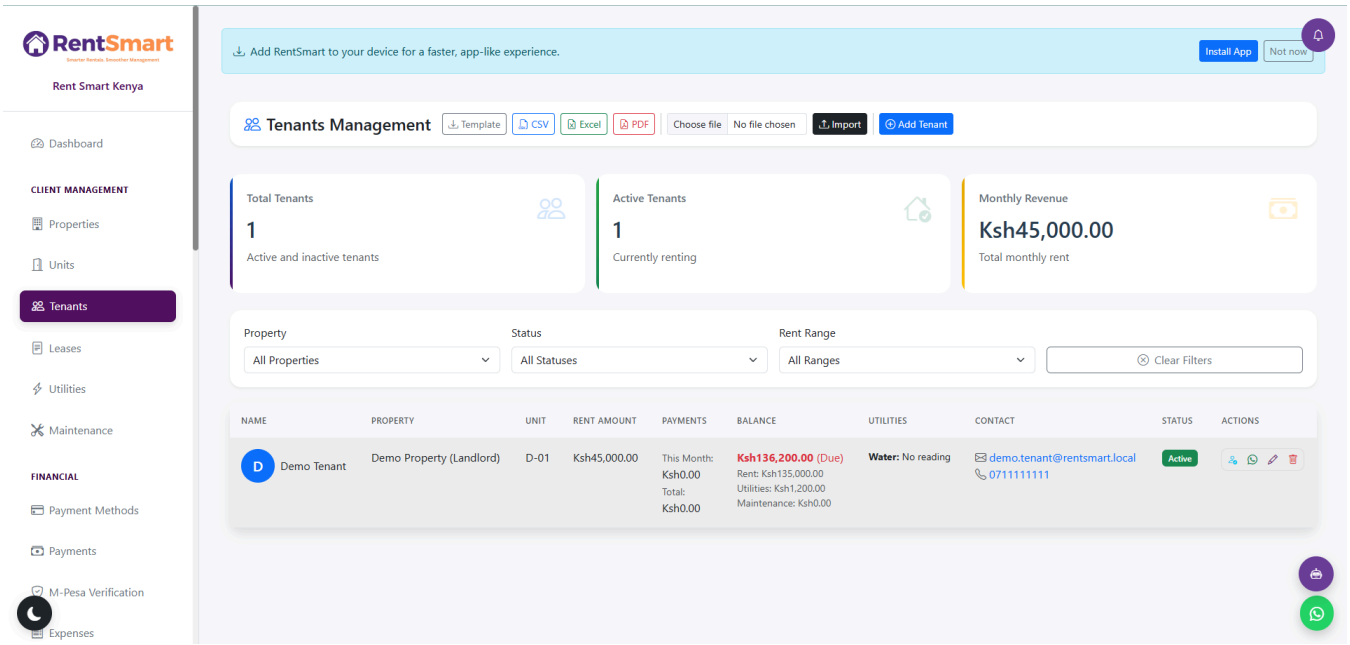
Feature / Module	What It Does
Unit Profiles	Each unit has its own profile with unit number/name, type (bedsitter, 1BR, 2BR, shop, office), floor, size, rent amount, and any specific notes.
Occupancy Status	Every unit shows its current status Occupied or Vacant with the tenant name and lease end date if occupied. Filter the list to see only vacancies instantly.
Rent Configuration	Set the monthly rent amount for each unit individually. This feeds directly into invoice generation and arrears calculations.
Unit-to-Tenant Linking	Each unit is linked to the tenant currently occupying it and their active lease. Moving a tenant out automatically vacates the unit and triggers any relevant notifications.
Vacancy Publishing	With one click, publish a vacant unit to the public Vacant Units page and from there, post it directly to Jiji and other online marketplaces.
Unit Performance History	View the full history of tenants, payments, maintenance, and revenue for any individual unit valuable for understanding the unit's track record.

Tenant Management

Complete tenant records from move-in to move-out

The Tenants module is the central record for every person or business that rents from you. All tenant interactions, payment history, lease details, maintenance requests, and communications are linked to their profile giving you a complete, chronological picture of each tenancy.

Tenant Profiles



Feature / Module	What It Does
Personal Information	Name, national ID, phone numbers, email address, employer details, emergency contact, and any notes. Everything you need to know about a tenant in one screen.
Unit & Lease Link	The tenant profile shows which unit they occupy and links directly to their lease agreement, making it easy to navigate between related records.
Payment History	A complete, chronological record of every payment the tenant has made amounts, dates, payment method, M-PESA reference codes, and which charges each payment was applied to.
Outstanding Balance	The tenant's current outstanding balance is displayed prominently on their profile rent arrears, utility arrears, and maintenance charges shown separately.
Statements	Generate a professional tenant statement for any date range directly from the profile. The statement shows all charges, payments, and the running balance. Can be downloaded as PDF.
Document Upload	Attach copies of the tenant's ID, lease agreement, guarantor details, move-in inspection report, and any other documents to their profile.

Tenant Portal Access	Activate the tenant's self-service portal access directly from their profile. Set their login credentials so they can view their account online at any time.
Maintenance History	All maintenance requests submitted by or on behalf of a tenant are visible from their profile, giving you context on their property usage patterns.

Tenant Onboarding

Adding a new tenant in RentSmart takes less than 5 minutes. The system guides you through capturing their details, assigning their unit, creating their lease, and setting up their utilities all in sequence.

- Step 1: Create the tenant profile with personal details
- Step 2: Assign them to their unit
- Step 3: Create their lease agreement with start date, end date, rent amount, and deposit
- Step 4: Configure utility charges (water, electricity, etc.) for their unit
- Step 5: Activate their tenant portal access
- Step 6: System automatically creates their first invoice and notifies them

Move-Out Process

Feature / Module	What It Does
Final Settlement	When a tenant moves out, generate a final statement showing all outstanding charges, deposit applied, and any amount owed or refundable.
Unit Vacating	Mark the unit as vacant, ending the lease and removing the tenant from active occupancy counts automatically.
Record Retention	The tenant record is retained in the system after move-out. You can access their complete payment history and lease history at any time for reference.

Lease Management

Digital leases from creation to renewal

The Leases module manages the formal agreement between landlord and tenant. RentSmart stores every lease digitally, tracks its terms, and alerts you when action is needed — so no lease ever expires without your knowledge.

Feature / Module	What It Does
Digital Lease Creation	Create a lease directly in RentSmart capturing all key terms: tenant, unit, start date, end date, monthly rent, deposit paid, notice period, and any special terms.

Lease Duration Tracking	The system automatically calculates how many days/months remain on each active lease. A visual indicator shows leases approaching expiry so you can act in time.
Automated Renewal Reminders	Receive an automated notification when a lease is within your configured notice period of expiring. The tenant can also be notified simultaneously. No lease expires by surprise.
Lease Renewal	Renew a lease with a few clicks — update the end date, adjust the rent amount if needed, and the system creates the updated lease record while archiving the previous one.
Deposit Tracking	Record the deposit amount paid on move-in. The system tracks the deposit separately from rent payments and shows it on tenant statements.
E-Signatures	Send lease documents for electronic signing through the RentSmart e-signatures module. No printing, scanning, or couriering. Signed leases are stored digitally on the system.
Lease History	Every property and unit maintains a full history of all past leases. This is invaluable for understanding tenancy patterns and for legal or audit purposes.
Lease Documents	Attach the signed lease PDF, addendums, guarantor agreements, and any other related documents directly to the lease record.

> *RentSmart's automated lease expiry tracking eliminates one of the most common and costly mistakes in property management, letting leases lapse without a renewal or notice in place.*

Invoices & Billing

Accurate, automated billing for rent, utilities & maintenance

RentSmart's invoicing system is one of its most powerful features. It separates rent, utilities, and maintenance charges into clearly labelled line items so every invoice is transparent, accurate, and dispute-proof. Invoices update automatically when payments are made.

Rent: Due, Utilities: Due, Maintenance: Paid

How Invoicing Works

RentSmart generates invoices based on the charges configured for each tenant. When you create a tenant and set up their lease and utilities, the system knows what to bill them each month. You do not need to create invoices manually; the system does it for you.

Feature / Module	What It Does
Automated Invoice Generation	Invoices are generated automatically at the start of each billing period based on the tenant's configured rent amount, utility charges (with updated readings), and any pending maintenance fees.
Itemised Billing	Every invoice clearly separates rent, each utility type (water, electricity, garbage, etc.), and maintenance charges as individual line items. The tenant sees exactly what they are paying for.
Invoice Status Tracking	Each invoice has a status — Unpaid, Partially Paid, or Paid. The status updates automatically when payments are recorded, with no manual intervention required.
Partial Payment Handling	When a tenant pays part of an invoice, the system records the partial payment, updates the invoice balance, and shows the remaining amount due clearly. No manual calculation needed.
Advance Payment Handling	When a tenant pays in advance (e.g., 3 months upfront), the system allocates the payment across the relevant billing periods automatically, showing credit balances correctly.
Invoice History	Every invoice ever generated is stored permanently in the system. You can retrieve, view, and re-print any invoice from any period at any time.
Invoice Sharing	Send invoices to tenants directly from RentSmart via SMS or email with a single click. Tenants can also download their invoices from the self-service portal.
Branded Invoices	All invoices carry your company name, logo, and contact details — presenting a professional image to every tenant. Branding is set up once and applied automatically to all documents.
Payment Receipts	Every recorded payment automatically generates a receipt. Receipts include the payment amount, method, date, M-PESA reference (if applicable), and the invoice it was applied to.
Invoice PDF Export	Download any invoice or receipt as a PDF for your records, for sharing with accountants, or for printing.

Invoice Accuracy — Why It Matters

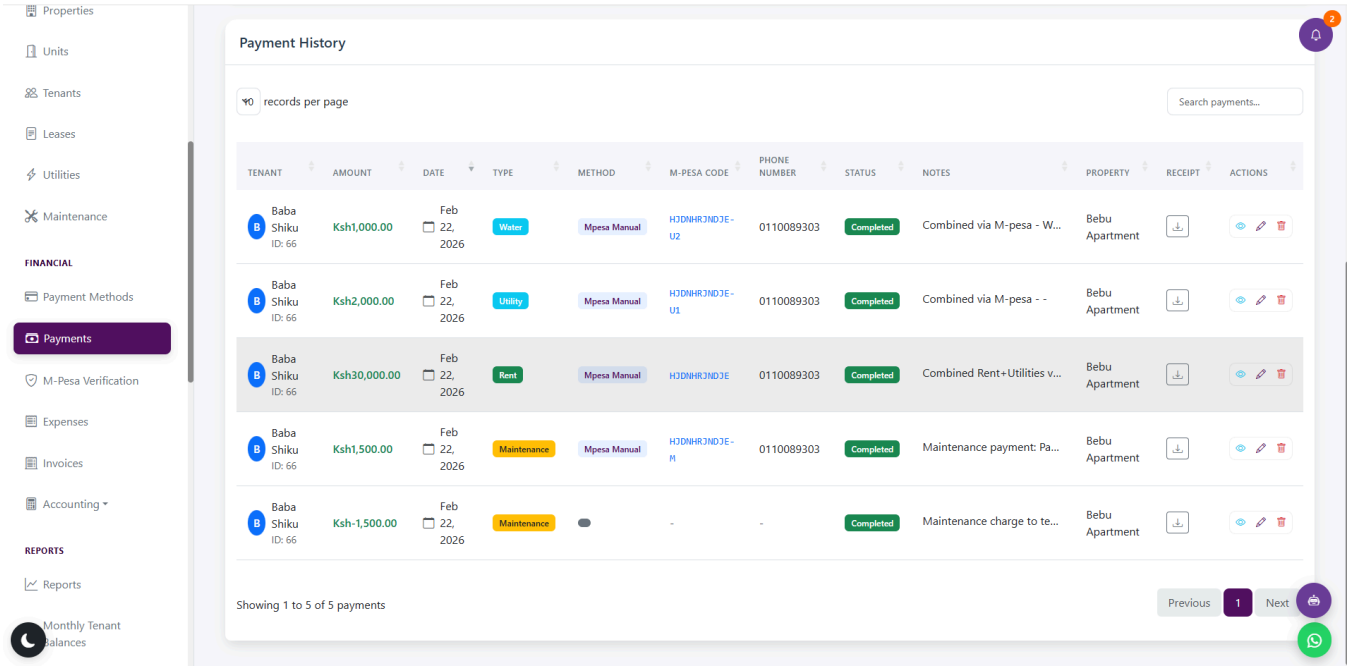
One of the most common disputes between landlords and tenants in Kenya is over billing accuracy — particularly when utilities are mixed in with rent or when partial payments are applied incorrectly. RentSmart eliminates this problem entirely by:

- ✓ Keeping rent, utilities, and maintenance as separate line items — always
- ✓ Automatically calculating utility charges from meter readings — no manual math
- ✓ Updating invoice balances in real time when payments are recorded
- ✓ Generating a receipt for every payment with a verifiable reference
- ✓ Giving tenants access to view the same invoice you see — no discrepancies

Payments & M-PESA Integration

Collect, record and reconcile all rental payments

The Payments module is where all money flowing into your property business is recorded and managed. RentSmart is built around M-PESA — Kenya's dominant payment method — while also supporting cash, bank transfer, cheque, and any other method your tenants use.



Recording Payments

Feature / Module	What It Does
Record Any Payment	Record a payment for any tenant, for any charge type (rent, utility, maintenance, deposit), at any time. The system immediately updates the relevant invoice and balance.
M-PESA Payments	Record M-PESA payments with the exact transaction code, amount, and date. The M-PESA reference is stored and searchable — so you can verify any payment with a single search.
Cash Payments	Record cash payments with date and receipt number. The system generates a receipt automatically.
Bank Transfer Payments	Record bank transfer payments with bank reference numbers for reconciliation.
Multiple Payment Methods	Configure all the payment methods you accept — M-PESA, bank, cash, cheque, and others — so that every payment type is correctly categorised in your financial records.
Partial Payments	Record partial payments against an outstanding invoice. The balance updates automatically and the invoice remains open until fully settled.
Advance Payments	Handle advance rent payments correctly — the system allocates them to the right billing periods and shows the credit balance on the tenant's account.
Payment Allocation	Specify exactly which invoice or charge type a payment is being applied to — preventing ambiguity and ensuring your records are always accurate.

M-PESA Verification

The M-PESA Verification module is a dedicated tool for reconciling M-PESA transactions against your expected payment records. This is especially useful when you receive multiple M-PESA payments daily from different tenants.

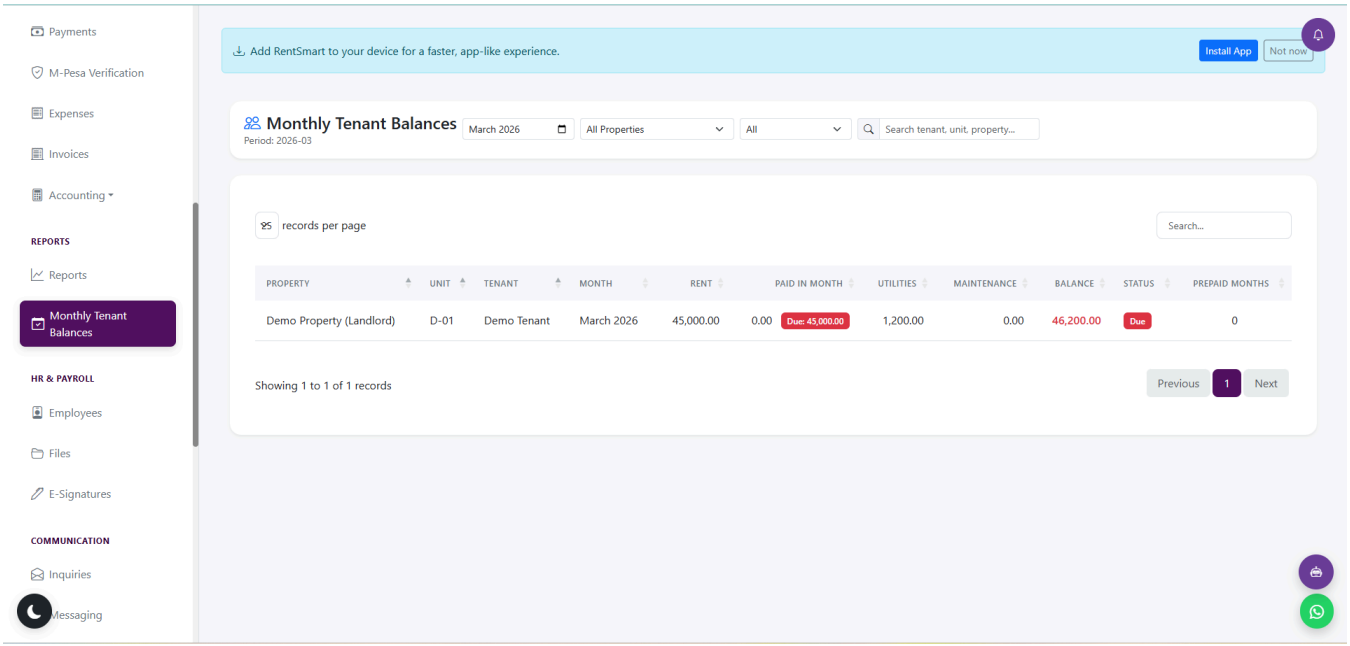
Feature / Module	What It Does
Transaction Matching	Cross-reference incoming M-PESA transactions against outstanding invoices to confirm payments quickly and accurately.
Reference Search	Search any M-PESA transaction code to find the corresponding payment record instantly — essential for resolving tenant disputes about whether a payment was received.
Reconciliation Reports	Generate reconciliation summaries showing which M-PESA transactions have been matched to invoices and which are still unallocated.
Audit Trail	Every M-PESA payment entry is logged with who recorded it and when — providing a complete, tamper-evident audit trail.

> *M-PESA Verification is exclusive to roles that manage tenants directly (Landlord, Manager, Agent). Realtors do not have this module as they manage sales transactions rather than monthly rental payments.*

Monthly Tenant Balances

Your arrears and balance management centre

The Monthly Tenant Balances report is one of the most important tools in RentSmart. It gives you a complete, real-time view of every tenant's financial standing — in a single, organised screen. No spreadsheets. No manual calculations. No guesswork.



Feature / Module	What It Does
At-a-Glance Arrears	See exactly how much every active tenant owes at any point in time — broken down by rent arrears, utility arrears, and maintenance charges outstanding.
Monthly Balance Snapshot	Select any month to see each tenant's opening balance, total charges raised, total payments received, and closing balance for that period.
Property Filtering	Filter the report by property to focus on one building at a time — useful for reviewing arrears per property and planning follow-ups.
Cumulative Arrears View	Identify tenants who have been accumulating arrears over multiple months — a critical early-warning tool for managing problem accounts before they become unrecoverable.
Overpayment Detection	The report also shows credit balances — tenants who have overpaid or paid in advance. This prevents you from accidentally raising invoices against tenants who already have a credit.
Export to Excel & PDF	Export the full tenant balances report to Excel for further analysis or to PDF to share with property owners or send to a debt collection service.
Tenant Statement Drill-Down	Click any tenant in the report to open their full statement showing every charge and payment in detail — so you can verify any balance instantly.
Follow-Up Actions	From the balances report, trigger SMS or email reminders directly to tenants with outstanding balances — without leaving the screen.

> *Monthly Tenant Balances is available to Landlords, Managers, and Agents — roles that actively manage tenant accounts. Realtors do not have this module as their model is based on property listings and sales rather than monthly rental management.*

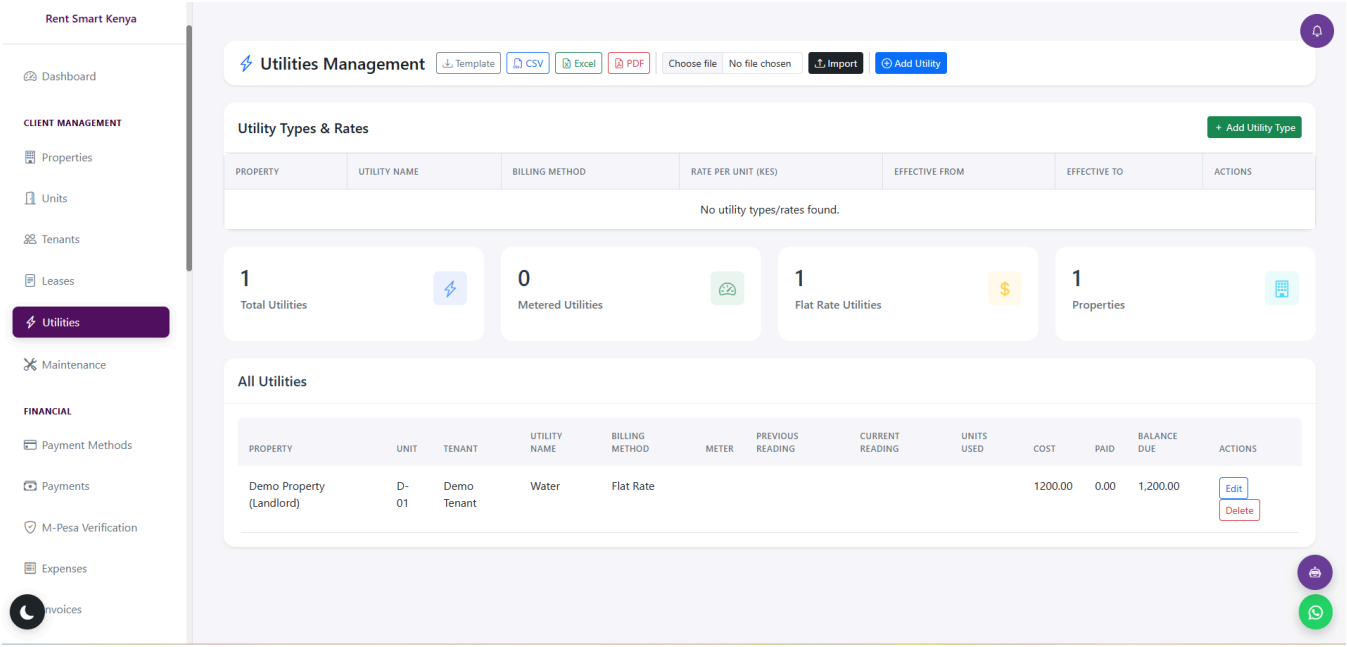
Why Tenant Balances Matter

- ✓ Identify overdue rent before it compounds into irrecoverable arrears
- ✓ Have accurate figures when speaking to tenants about payment — no disputes
- ✓ Provide property owners with accurate end-of-month statements
- ✓ Support legal processes (eviction, demand letters) with documented balance records
- ✓ Plan cash flow by knowing exactly what is expected versus what is outstanding

Utilities Management

Accurate utility billing — separate from rent, always

Utility disputes are one of the most common sources of conflict between tenants and landlords in Kenya. RentSmart's Utilities module eliminates this problem by tracking every utility type separately, calculating charges automatically from meter readings, and presenting utility costs as distinct line items on every invoice.



Feature / Module	What It Does
Any Utility Type	Set up any type of utility as a trackable item: water, electricity, garbage collection, internet/Wi-Fi, security levy, or any other shared service. No limit on utility types per unit.
Metered Utilities	For metered utilities (water, electricity), enter the previous and current meter readings. The system automatically calculates units consumed and multiplies by your configured rate to produce the charge — no manual math required.
Flat-Rate Utilities	For utilities charged at a fixed amount (garbage, security, internet), set the flat monthly rate and the system automatically includes it on every invoice for that unit.

Per-Unit Configuration	Each unit can have its own utility setup — different rates, different utility types. A ground-floor shop and a penthouse apartment can have completely different utility configurations.
Readings History	Every meter reading is stored permanently. If a tenant disputes a utility charge, you can show them the exact readings recorded for every billing period going back to their move-in date.
Automatic Invoice Integration	Utility charges are added to the tenant's monthly invoice automatically — as clearly labelled separate line items from rent. No manual invoice editing required.
Utility Payments	Payments for utility charges are recorded and tracked separately, giving you a clear view of what has been paid for rent versus what has been paid for utilities.
Utility Summary Reports	Run utility-specific reports to analyse consumption patterns, identify units with unusually high usage, and ensure charges are being applied correctly.

> *Keeping utilities separate from rent is not just good practice — it protects you legally. RentSmart's utility tracking gives you an auditable record for every charge raised, making disputes straightforward to resolve.*

Maintenance Management

Log, assign, track and close every job — nothing falls through

Maintenance issues are a constant reality in property management. The challenge is not that they happen, it is tracking them, ensuring they get done, and keeping a record. RentSmart's Maintenance module gives you a complete system to manage every job from the moment it is reported to the moment it is closed.

Feature / Module	What It Does
Log Requests	Record any maintenance issue with a full description, the unit and property it relates to, the date reported, the priority level (Urgent, High, Normal, Low), and the reporting source (tenant, inspection, or self-identified).
Photo Attachments	Attach photos of the issue directly to the maintenance request — invaluable for understanding the scope of work before assigning it and for documenting the condition before and after repair.
Staff Assignment	Assign each job to a specific employee (caretaker, fundi, plumber, electrician) so there is clear accountability. The assigned staff member can see their tasks in the system.
Status Tracking	Track every job through a clear workflow: Pending → Assigned → In Progress → Completed → Closed. Everyone can see the current status without needing to ask.
Tenant Submissions	Tenants using the self-service portal can submit maintenance requests themselves. These appear in your maintenance queue immediately — you review, approve, and assign them.

Tenant Notifications	Tenants receive automatic notifications when their maintenance request is assigned and when it is completed — keeping them informed without any manual communication from you.
Job Cost Recording	Record the cost of each completed maintenance job — parts, labour, or contractor fees. This links to expense tracking for accurate profitability reporting at the property level.
Maintenance Invoicing	Where maintenance costs are to be charged back to the tenant (e.g., damage caused by the tenant), add the charge directly to their invoice from the maintenance record — with a clear reference.
Full History	Every completed job is retained in the maintenance history for each unit and property. Use this to identify recurring issues, plan preventive maintenance, and track contractor performance.
Maintenance Reports	Run maintenance reports by property, unit, staff member, or time period to understand maintenance volumes, costs, and response times across your portfolio.

Financial Reports & Accounting

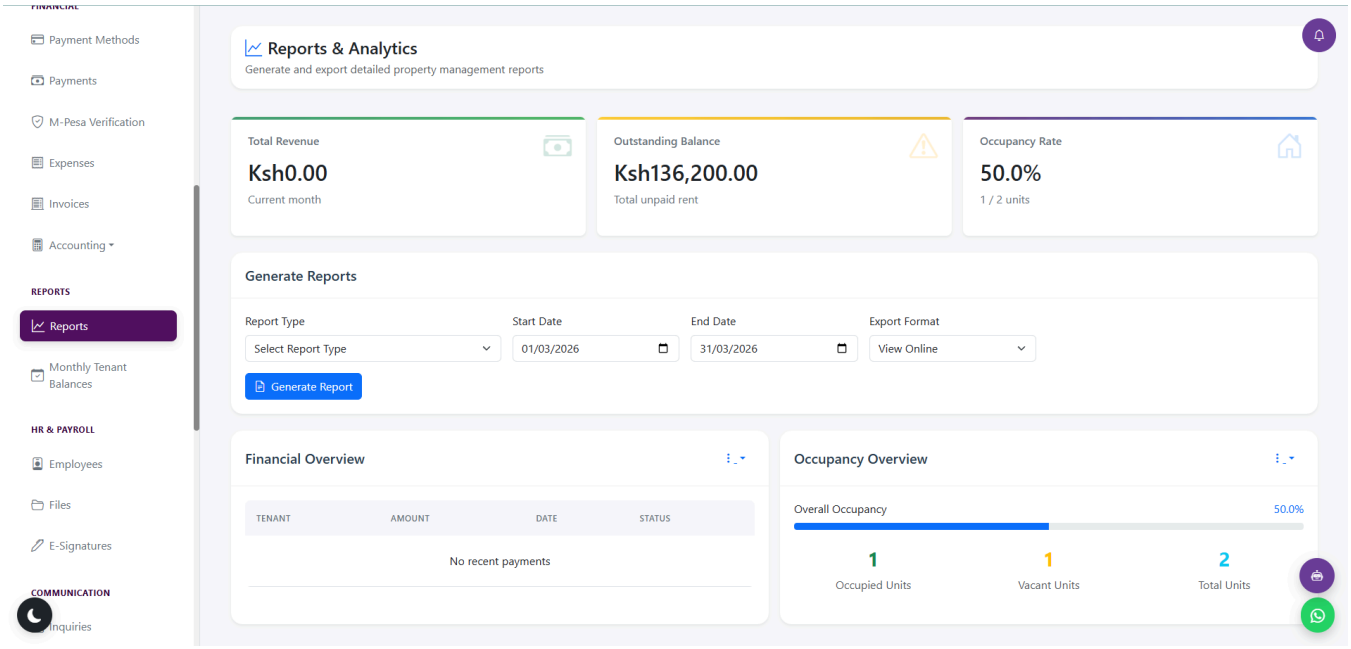
From daily tracking to formal financial statements

RentSmart provides a complete financial management system that covers everything from recording a daily expense to generating a formal Balance Sheet. For smaller landlords, the reports module provides all the clarity you need. For larger operations and property management firms, the full accounting suite delivers professional, accountant-ready financial statements.

Expense Tracking

Feature / Module	What It Does
Record Any Expense	Log any property-related cost — repairs not charged to tenants, insurance premiums, rates and levies, cleaning, landscaping, management fees, advertising costs, and more.
Expense Categories	Assign each expense to a category for organised reporting. Categories are customisable to match your chart of accounts or reporting requirements.
Property-Level Assignment	Assign every expense to the property it relates to. This enables accurate profitability reporting per property — showing true net income after all costs.
Receipt Attachments	Attach supplier invoices and receipts to expense records for a fully paperless, auditable records system.
Net Income Calculation	RentSmart calculates net income (total revenue minus total expenses) at the property and portfolio level automatically — so you always know your true profitability.

Financial Reports



Feature / Module	What It Does
Monthly Income Reports	A clear summary of all income received in any month, broken down by property and charge type (rent, utilities, maintenance). One report shows your complete income picture.
Custom Date-Range Reports	Run reports for any period — weekly, monthly, quarterly, annually, or any custom range. The system generates the report instantly from live data.
Property Performance Reports	Compare the performance of individual properties side by side — revenue, expenses, occupancy rate, and net income — to identify your best and underperforming assets.
Export Options	Export any report to Excel (for further analysis and custom calculations) or PDF (for sharing with property owners, investors, or accountants). Exports are accounting-ready.

Full Accounting Suite

For businesses that require formal accounting records, RentSmart includes a complete double-entry accounting module. This is the same accounting functionality available to all tenant-managing roles (Landlord, Manager, Agent) and to Realtors for their sales transactions.

Feature / Module	What It Does
Chart of Accounts	Set up your account structure — assets, liabilities, equity, income, and expense accounts — tailored to your property business. The chart of accounts feeds all formal statements.
General Ledger	Every financial transaction recorded in RentSmart is posted to the general ledger. View the complete ledger for any account, any period, with debit and credit columns clearly shown.

Trial Balance	Generate a trial balance at any date to verify that all debits and credits balance across your chart of accounts — the foundation of accurate financial reporting.
Balance Sheet	A formal balance sheet showing all assets, liabilities, and owner's equity at any point in time. Suitable for presenting to banks, investors, or tax authorities.
Profit & Loss Statement	A full P&L statement for any period showing total income, cost of operations, gross profit, expenses, and net profit. Formatted for submission to accountants or HMRC-equivalent authorities.
Statements	Generate and download formal financial statements for any entity, property, or time period. Shareable in PDF format with your company branding.

> *The accounting suite integrates with Zoho Books, QuickBooks, and Odoo ERP. If you already use one of these platforms, RentSmart can push income and expense data directly — eliminating double-entry bookkeeping.*

HR, Staff & Payroll

Manage the people who keep your properties running

RentSmart includes a staff management module for every role that employs or contracts people to work at their properties. From a single caretaker to a team of 20 across multiple properties, the system gives you structured records for all staff and their payments.

Feature / Module	What It Does
Employee Profiles	Maintain a complete profile for each employee or contractor: name, national ID, role, phone number, email, date of hire, and the property they are assigned to.
Staff Categories	Classify staff by type — Caretaker, Gardener, Fundi (handyman), Cleaner, Security Guard, Plumber, Electrician, or any other custom category you define.
Property Assignment	Link each staff member to the specific property or properties they work at. This connection is used for maintenance assignment and for generating property-specific staff costs.
Staff Payment Records	Record all salary payments, allowances, and contract payments for each employee. The system maintains a complete payroll history per person and per property.
Staff Cost Reporting	View total staff costs by property and by period — important for accurate profitability calculations when preparing owner statements.
Document Storage (Files)	Store copies of employment contracts, ID documents, NSSF/NHIF certificates, and any other staff-related documents in the Files module, linked to each employee record.

E-Signatures for Staff Docs	Use the E-Signatures module to send employment contracts and other documents to staff for electronic signing — no printing or in-person signing required.
Bulk Staff Management	For Premium and Enterprise accounts, perform bulk actions on staff records — payroll batch entries, bulk assignment changes, and bulk export of staff data.

Communication — Messaging, SMS & Notices

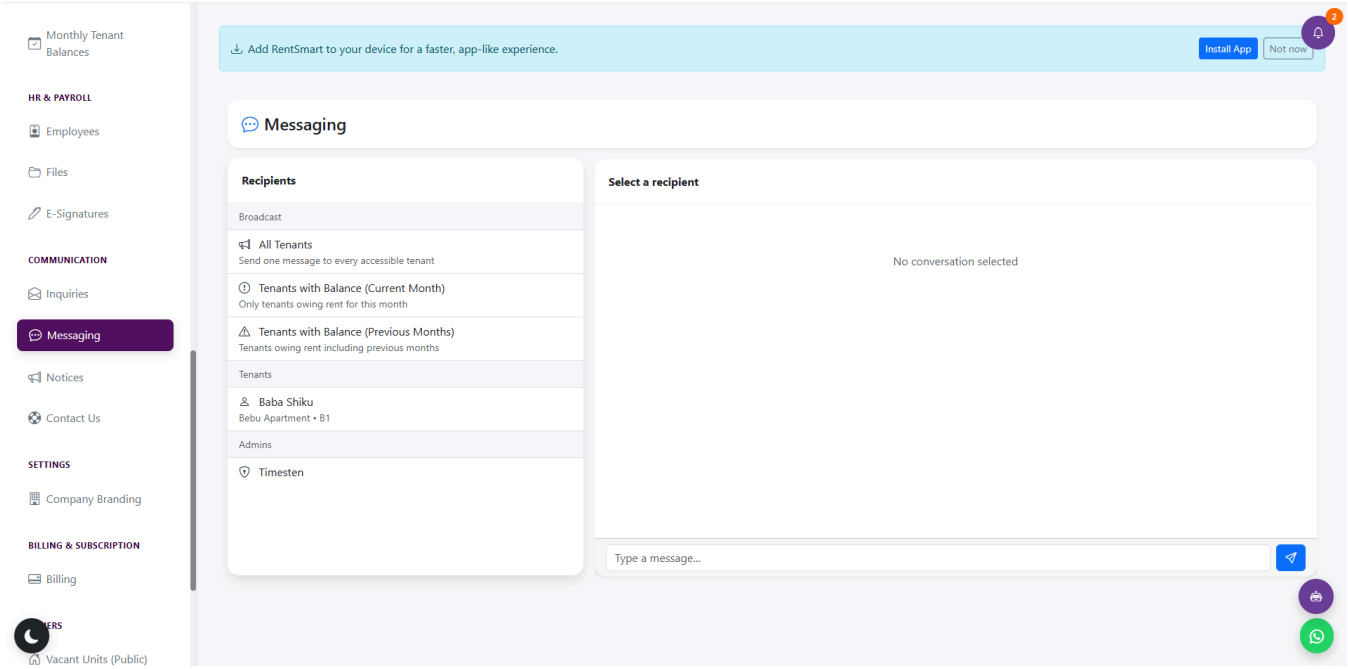
Stay connected with tenants without leaving the platform

Effective communication is a hallmark of professional property management. RentSmart provides multiple communication channels, automated notifications, direct messaging, bulk SMS, and formal notices all managed from within the platform. Every communication is logged, so you always have a record of what was sent and when.

Automated Notifications

Feature / Module	What It Does
Rent Due Reminders	Automatically send SMS and/or email reminders to tenants a configurable number of days before rent is due. Reduces late payments without any manual effort.
Payment Confirmations	Every time a payment is recorded, the tenant automatically receives a confirmation with the amount paid, the invoice it was applied to, and their remaining balance. Eliminates follow-up questions.
Lease Renewal Alerts	Both the landlord/manager and the tenant receive automatic notifications as a lease approaches its expiry date. Configure the lead time (e.g., 60 days, 30 days, 7 days before expiry).
Maintenance Updates	Tenants receive automatic status updates when their maintenance request is acknowledged, assigned to a technician, and completed — keeping them informed without any manual communication.
Invoice Notifications	When a new invoice is generated, the tenant receives an automatic notification with the invoice amount and due date, and a link to view it in their portal.

Messaging & Bulk Communication



Feature / Module	What It Does
Direct Tenant Messages	Send a private message to any individual tenant directly from the system. Messages are logged, so you have a record of all communications with each tenant.
Bulk SMS	Send a single SMS message to all tenants, to all tenants in a specific property, or to a filtered group — ideal for rent reminders, maintenance shutdowns, or important announcements.
Bulk Email	Send bulk emails to any group of tenants. Emails are branded with your company details and can include attachments such as notices or updated policy documents.
Notices Module	Create and distribute formal notices — rent increase letters, breach of lease notices, end-of-tenancy notices, or general property announcements. Notices are templated, logged, and can be sent via SMS, email, or the tenant portal.
Message History	Every message sent through RentSmart — whether automated or manual — is logged with the sender, recipient, date, and content. This provides an evidential record in case of disputes.

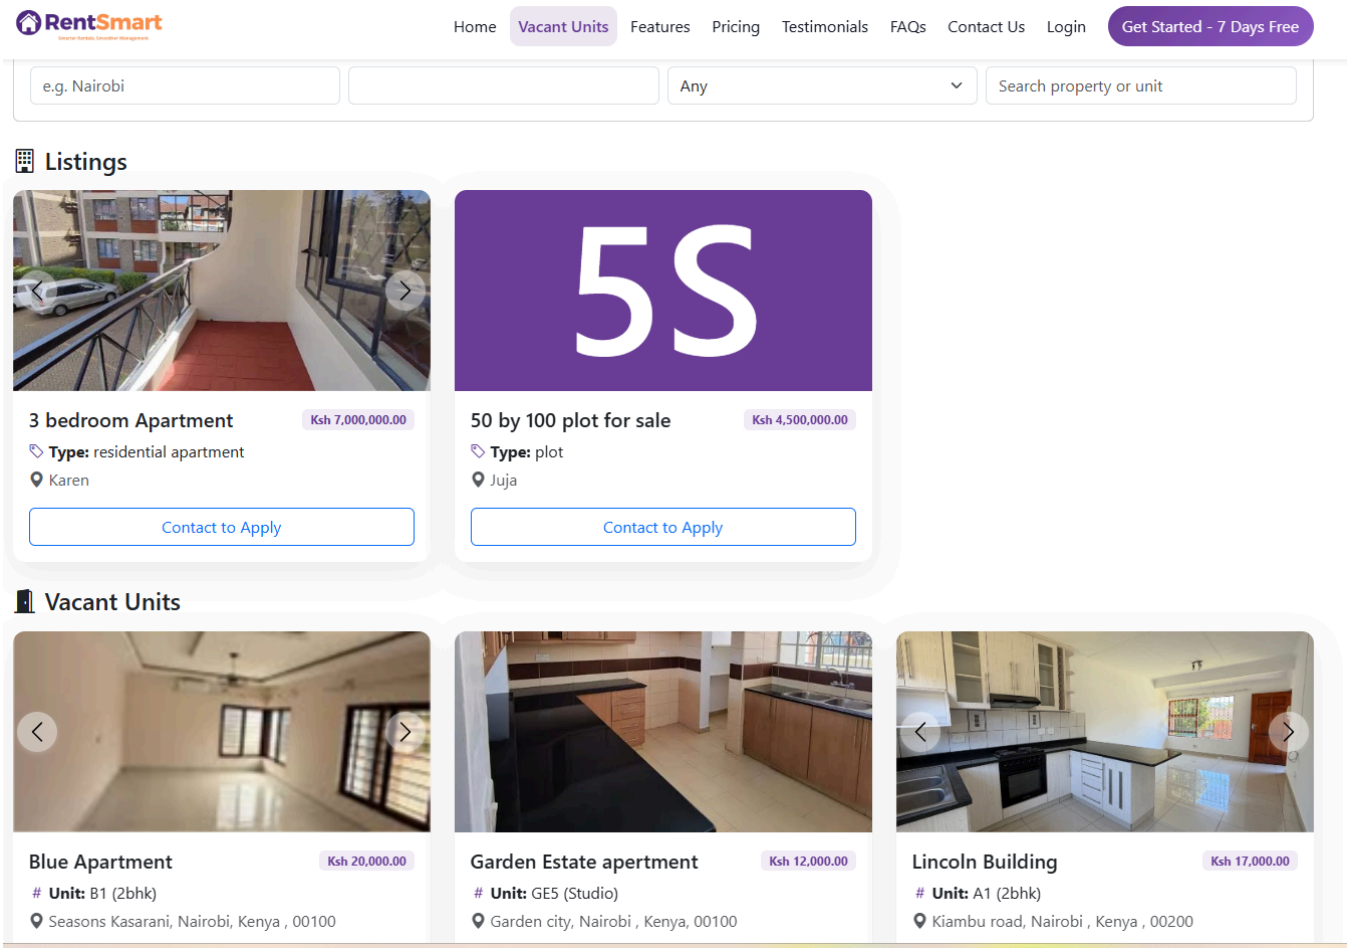
Inquiries Management

Feature / Module	What It Does
Inbound Inquiries	All inquiries submitted through your public Vacant Units page, your marketplace listings, or your Jiji posts land in the Inquiries module — centralised in one inbox.
Inquiry Tracking	Track the status of each inquiry: New, Contacted, Viewing Scheduled, Converted, or Closed. Never lose track of a prospective tenant.

Response Management	Respond to inquiries directly from RentSmart. Your response is logged and the inquiry status updates automatically.
Lead Conversion	Convert a successful inquiry directly into a lead (for Agents and Realtors) or a tenant profile (for Landlords and Managers) without re-entering any data.

> *Messaging and Notices are available to Landlords, Managers, and Agents who manage ongoing tenant relationships. Realtors do not have this module — their communication is handled through the CRM and Inquiries modules.*

Vacant unit Advertisement & Listing



Maximizing occupancy is at the core of successful property management. RentSmart makes it easy to manage vacant units and streamline your listing process from one centralized platform. Instantly publish available units, track listing performance, manage inquiries, and schedule viewings all within the system. Real-time vacancy updates ensure your listings are always accurate and up to date. With organized applicant tracking and seamless status updates, you can reduce vacancy time and fill units faster, all while maintaining complete visibility and control.

ROLE GUIDE: Landlord

For individual property owners managing their own portfolio

As a Landlord, you are the property owner and the manager. RentSmart gives you direct, hands-on control over every aspect of your portfolio with professional-grade tools that previously only large management companies could afford.

Who This Role Is For

- Individual landlords with 1–50 properties
- Property owners who self-manage without hiring a management company
- Small-scale investors managing apartment blocks, bedsitters, or commercial units
- Landlords transitioning from spreadsheets to a proper management system

Landlord Dashboard

Your dashboard shows the live financial health of your entire portfolio. The Rent Balance Wallet shows money received, Expected to Receive shows what should come in, and Money Not Received shows your current arrears all broken down by rent, utilities, and maintenance. Filter by month or property for drill-down analysis.

Full Feature Access — Landlord Navigation

Feature / Module	What It Does
Dashboard	Real-time portfolio overview: revenue, arrears, occupancy, and payment activity.
Properties	Add and manage all your properties with profiles, documents, and performance data.
Units	Manage all rentable units, set rent amounts, and monitor occupancy status.
Tenants	Complete tenant records with payment history, balances, statements, and portal access.
Leases	Digital leases with term tracking, renewal alerts, and e-signature support.
Utilities	Track metered and flat-rate utility charges per unit, with readings history.
Maintenance	Log, assign, and track all maintenance jobs with cost recording.
Payment Methods	Configure M-PESA, cash, bank, and other accepted payment methods.
Payments	Record and view all incoming rent, utility, and maintenance payments.
M-PESA Verification	Verify and reconcile M-PESA transactions against invoices.

Expenses	Track all property operating expenses for accurate net income reporting.
Invoices	View, manage, and share automated invoices and payment receipts.
Accounting	Full accounting suite: Chart of Accounts, Ledger, Trial Balance, Balance Sheet, P&L.
Reports	Monthly income reports, tenant balance reports, and custom date-range reports.
Monthly Tenant Balances	At-a-glance arrears report showing every tenant's current outstanding balance.
Employees (HR)	Staff records, payroll history, and document storage for property staff.
Files & E-Signatures	Document management and electronic signing for leases and agreements.
Messaging & Notices	Direct messaging, bulk SMS/email, and formal notices to tenants.
Inquiries	Manage inbound inquiries from prospective tenants.
Company Branding	Apply your logo and colours to all invoices, receipts, and the tenant portal.
Vacant Units	Publish vacancies publicly and post to Jiji and other marketplaces.
Integrations	Connect to Zoho Books, QuickBooks, Odoo, Facebook, and marketplace platforms.

Typical Landlord Monthly Workflow

- At month start: Review upcoming lease renewals and send renewal notices
- Record meter readings for utilities and confirm auto-generated invoices
- As payments arrive: Record via M-PESA or other method — receipts go out automatically
- Mid-month: Run Monthly Tenant Balances to identify arrears and send reminders
- Assign and track any maintenance requests raised by tenants or identified on inspection
- At month end: Review income vs expenses and generate property performance reports
- Share statements with co-owners or accountants via PDF export

ROLE GUIDE: Property Manager

For professional managers handling multiple client portfolios

As a Property Manager, you are a professional running a management business — not just your own properties, but properties on behalf of multiple owners. RentSmart gives you the scale, reporting, and control tools that a professional management firm needs.

Who This Role Is For

- Professional property management companies managing 10–500+ units
- Managing agents operating under mandate from multiple property owners
- Real estate firms with a dedicated rental management division

- Commercial property managers handling offices, retail, and mixed-use developments

How the Manager Role Differs from Landlord

The Manager role has identical feature access to the Landlord role. The key difference is the context and scale of operation:

Feature / Module	What It Does
Multi-Owner Management	Manage properties belonging to different owners from a single account. Properties are clearly separated so each owner's data stays distinct. Generate owner-specific reports without any cross-contamination.
Bulk Actions	Perform actions on multiple properties or tenants simultaneously — bulk rent invoice generation, bulk reminder sends, bulk tenant balance exports — saving hours of repetitive work each month.
Advanced Vacancy Analytics	Track vacancy rates across all managed properties and receive alerts when occupancy drops below target thresholds. Proactively manage vacancies before they impact owner income.
Owner Statement Generation	Generate formal income and expense statements per property, formatted for sharing with property owners. Export as PDF or Excel with your management company's branding.
Audit Trails	Every action taken by any team member in the system is logged with a timestamp and user identity. Essential for accountability in a multi-staff management operation.
Staff Management at Scale	Manage larger teams across multiple properties — caretakers, cleaners, security staff, maintenance technicians — with full payroll records and document management.
Activity Logs	Review all system activity: who added a payment, who changed a rent amount, who sent a notice. Full accountability for every action.
Advanced Financial Reporting	Custom date-range reports, net income by property, expense breakdowns by category, and accounting-ready exports for submission to client accountants.

Property Manager Navigation

The Property Manager has access to the exact same navigation modules as the Landlord all client management, financial, HR, communication, and integration features are fully available. The difference is in the scale and the reporting context, not the features.

Typical Manager Monthly Workflow

- Receive new management mandates: set up property, units, and existing tenants
- Daily: Record incoming M-PESA payments and verify against invoices
- Weekly: Review maintenance queue across all properties and follow up on pending jobs
- Monthly: Generate utility invoices with updated meter readings for all properties

- Monthly: Run tenant balances report and send arrears reminders in bulk
- Monthly: Generate owner income and expense statements and distribute
- Quarterly: Review vacancy analytics and discuss letting strategy with owners
- Ongoing: Manage lease renewals, staff records, and inbound inquiries

ROLE GUIDE: Agent

Full property management PLUS client and commission management

The Agent role is a powerful hybrid combining the full property management capabilities of the Landlord/Manager role with a dedicated CRM for managing clients, leads, and commissions. If you both manage properties AND source tenants, this is your role.

Who This Role Is For

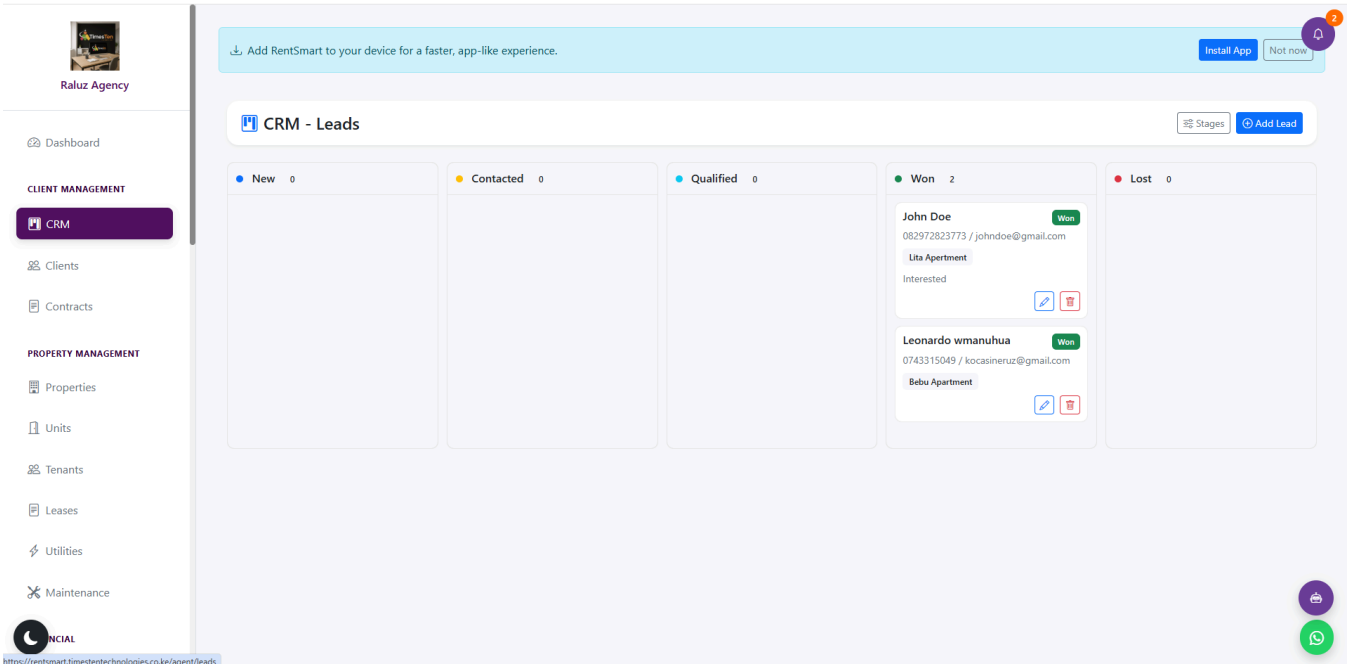
- Real estate agents who both source tenants AND manage rental properties
- Agency firms with property management mandates and a letting pipeline
- Agents who need to track commissions alongside monthly rental management
- Businesses that do tenant sourcing, property management, and financial reporting under one operation

What Makes the Agent Role Unique

The Agent role has EVERYTHING in the Landlord and Manager roles PLUS the CRM module. This makes it the most comprehensive role on the platform covering the full lifecycle from finding a tenant to managing their tenancy end-to-end.

> *The Agent role is the only role that combines full property management (Properties, Tenants, Leases, Utilities, Maintenance, M-PESA, Tenant Balances, Messaging) WITH a full CRM for leads, clients, and contracts. It is the complete platform in a single login.*

Agent-Exclusive: CRM Module



Leads

Feature / Module	What It Does
Lead Capture	Record every prospective tenant who expresses interest in any of your listed units. Capture name, contact details, property of interest, source, and date of first contact.
Pipeline Status	Track each lead through the full pipeline: New → Contacted → Viewing Scheduled → Offer Made → Converted / Lost. Every stage is tracked with timestamps.
Lead Source Tracking	Record where each lead came from — Jiji, Facebook, referral, walk-in, direct inquiry, or any other channel. Use this data to understand which marketing channels deliver the best results.
Follow-Up Management	Set follow-up reminders for each lead so no prospect falls through the cracks due to missed callbacks or delayed responses.
Lead-to-Client Conversion	Convert a qualified lead into a Client record in one click — carrying all their information across without re-entry.

Clients

Feature / Module	What It Does
Client Profiles	A dedicated profile for each client — individual or company — with contact details, interaction history, properties of interest, and linked contracts.
Property Matching	Link clients to specific units or properties they are interested in. When a matching unit becomes available, you can act immediately.

Client History	See the complete record of every viewing, communication, and transaction associated with each client.

Contracts & Commissions

Feature / Module	What It Does
Contract Creation	Create letting contracts or management mandate agreements directly in RentSmart, linked to the relevant client, property, and unit.
Commission Tracking	Record the commission amount due and received for each contract. Track outstanding commission payments separately from rental income for accurate agent income reporting.
Contract Status	Track each contract from Draft → Sent → Signed → Active → Completed. Know the status of every deal at a glance.
E-Signature on Contracts	Send contracts for electronic signing through the E-Signatures module. No printing, no delays, no lost documents.

Full Agent Navigation

The Agent navigation is divided into two main areas:

CRM Section (Agent-Exclusive)

Feature / Module	What It Does
CRM → Leads	Manage the full prospect pipeline from first contact to placement.
CRM → Clients	Detailed profiles and history for all active and past clients.
CRM → Contracts	Contracts, commissions, and E-Signature sending.

Property Management Section (Same as Landlord/Manager)

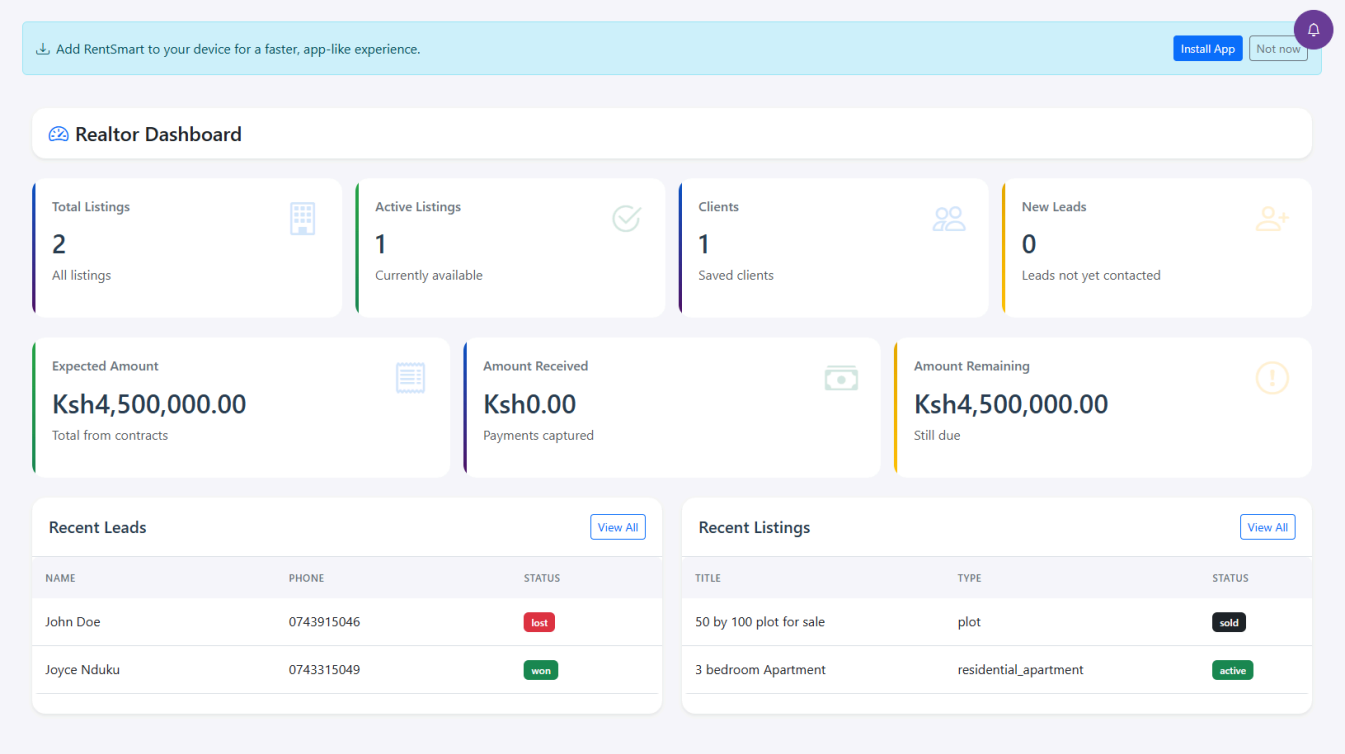
Feature / Module	What It Does
Properties, Units, Tenants, Leases	Full property and tenancy management.
Utilities, Maintenance	Utility billing and maintenance tracking.
Payments, M-PESA Verification, Invoices	Full payment management and M-PESA reconciliation.
Monthly Tenant Balances	Real-time arrears and balance reporting for all managed tenants.
Messaging, Notices	Direct and bulk communication with tenants.
Accounting, Reports, HR	Full financial and staff management.

Integrations, Vacant Units, Jiji	Marketplace posting and platform integrations.

ROLE GUIDE: Realtor

For property sales agents and lettings specialists

The Realtor role is purpose-built for real estate sales and lettings professionals whose primary business is sourcing buyers and tenants not managing ongoing property operations. It is a streamlined, sales-focused platform centred on listings, leads, clients, and contracts.



Who This Role Is For

- Real estate sales agents dealing in residential and commercial property
- Lettings agents who source tenants but hand over management to the landlord
- Property consultants earning commissions from sales and introductions
- Individual agents or small agencies focused on transactions rather than ongoing management

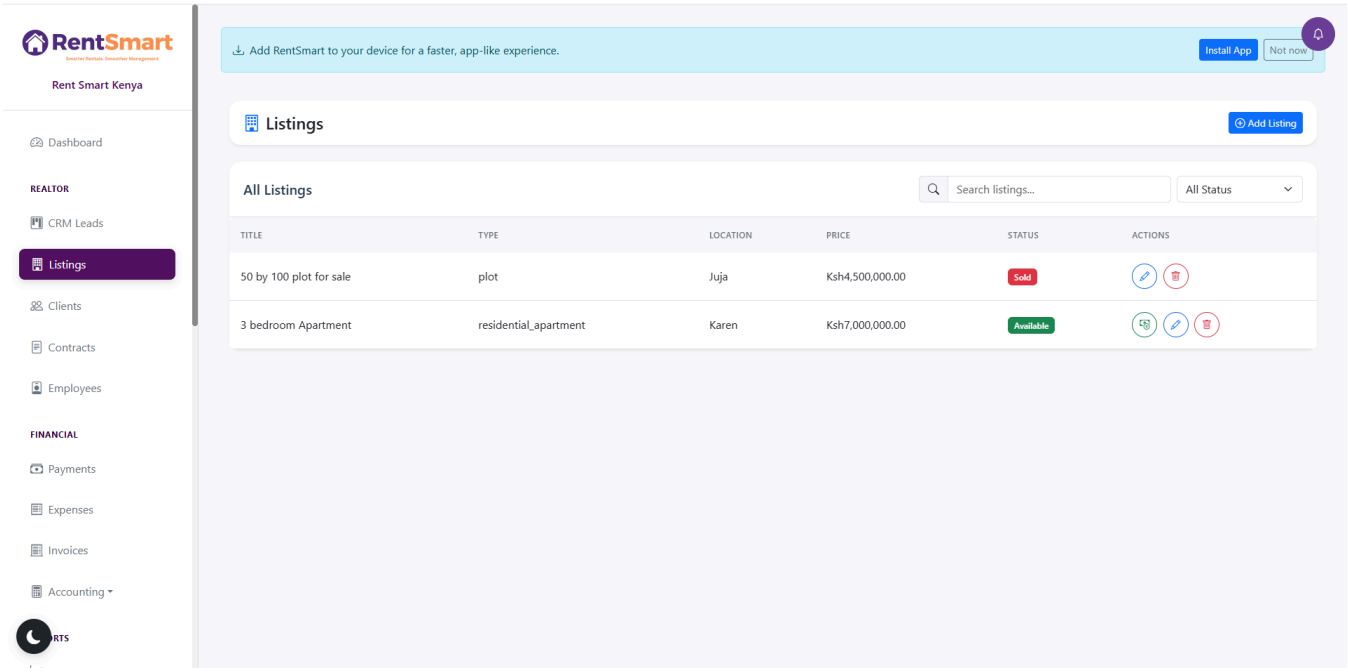
The Realtor Dashboard — Different by Design

Unlike the Landlord, Manager, and Agent dashboards which show rent wallets, utilities, and tenant balances — the Realtor dashboard is built around sales and lettings metrics:

Feature / Module	What It Does

Total Listings	The total number of property listings (for sale or to let) currently in your account.
Active Listings	Listings currently marked as active and being marketed to buyers or tenants.
Clients	The number of active clients in your CRM.
New Leads	Leads that have been captured but not yet contacted — your immediate action queue.
Expected Amount	The total contract value from all your active contracts — your expected commission income.
Amount Received	Commission and fees already received from completed contracts.
Amount Remaining	Outstanding commission still due from contracts in progress.
Recent Leads	A live feed of the most recently captured leads with their name, contact, and current pipeline status.
Recent Listings	Your most recently added listings with type and current status.

Realtor-Specific Features: CRM & Listings



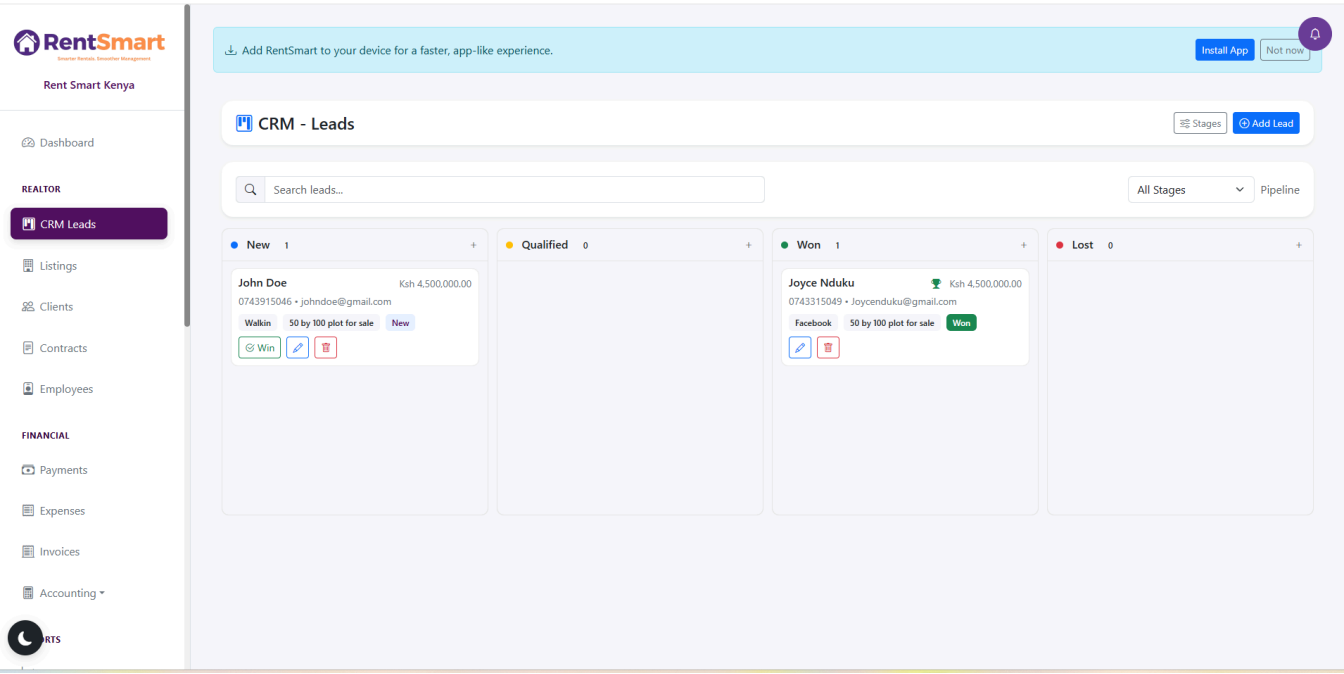
Listings (Realtor-Exclusive)

Unlike the Agent who manages the properties themselves, the Realtor works with Listings — marketing representations of properties available for sale or letting. Listings are designed for market presentation, not operational management.

Feature / Module	What It Does

Property Listings	Create detailed listings for any property type — residential apartment, house, land, commercial office, retail unit. Each listing includes price, description, photos, location, and key features.
Listing Types	Mark each listing as For Sale, To Let, or Sold/Let — with full status history. Know exactly which listings are active, under offer, and completed.
Listing Photos	Upload multiple high-quality photos for each listing. Photos are displayed in the public-facing Vacant Units page and on marketplace integrations.
Listing Sharing	Share individual listings via a direct link, or post them to Jiji, Facebook, and other marketplaces directly from the Listings module.
Listing Analytics	Track how many inquiries each listing has generated, helping you understand which properties and price points attract the most interest.

CRM — Leads, Clients & Contracts (Shared with Agent)



Feature / Module	What It Does
CRM Leads	Capture and manage every prospective buyer or tenant through a structured pipeline. Track source, status, follow-up dates, and notes for each lead.
Clients	Maintain detailed profiles for all active clients with interaction history, preferences, budget, and linked contracts.
Contracts	Create sale or letting contracts, record commission due and received, track contract status, and use e-signatures for paperless deal closing.

Realtor Financial Management

The Realtor has a focused financial module for tracking business income and expenses — without the rental-specific tools that are not relevant to their model:

Feature / Module	What It Does
Payments	Record all commission payments and fees received from completed transactions.
Expenses	Track business operating costs — advertising, vehicle, office, and professional development expenses.
Invoices	Generate professional invoices for commissions and fees, branded with your company details.
Full Accounting Suite	Chart of Accounts, General Ledger, Trial Balance, Balance Sheet, and P&L — the same formal accounting tools available to all roles.
Reports	Financial performance reports for your agency business — income by period, expense breakdowns, and net profit.

What the Realtor Does NOT Have (and Why)

The Realtor role is intentionally focused. The following modules are available to Landlords, Managers, and Agents but are not part of the Realtor workflow:

- ✗ Properties Management — Realtors do not manage operational properties; they market listings
- ✗ Units Management — No unit-level occupancy tracking; Realtors work at listing level
- ✗ Tenant Management — Realtors source tenants; they do not manage ongoing tenancies
- ✗ Leases — No lease creation or tracking; once a tenant is placed, management is handed over
- ✗ Utilities — No utility billing; no ongoing tenancy to bill utilities against
- ✗ Maintenance — No maintenance module; Realtors are not responsible for property condition management
- ✗ M-PESA Verification — No monthly rent reconciliation needed
- ✗ Monthly Tenant Balances — No tenant arrears to track
- ✗ Messaging & Notices — Tenant communication is via CRM and Inquiries, not bulk notices

> *The Realtor's streamlined interface means no clutter, no irrelevant modules, and no confusion. Every screen is relevant to closing deals and earning commissions — nothing more.*

Realtor Navigation Summary

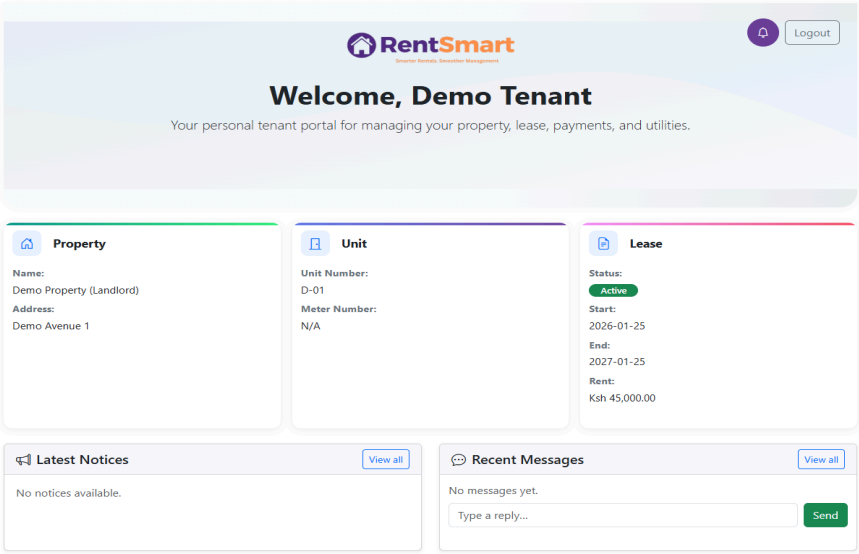
Feature / Module	What It Does
Realtor Dashboard	Sales-focused KPIs: listings, leads, clients, contracts, revenue.
CRM Leads	Full lead pipeline management.
Listings	Property listings for sale or to let — with photos, descriptions, and marketplace posting.
Clients	Client profiles and relationship history.
Contracts	Contracts, commissions, e-signatures.
Employees	Staff records for the agency team.
Payments, Expenses, Invoices	Financial management for commission income and agency costs.
Accounting Suite	Full accounting: Ledger, Balance Sheet, P&L, Trial Balance.
Reports	Business performance reports.
Files & E-Signatures	Document management and electronic signing.
Inquiries	Manage inbound inquiries from listings and marketplaces.
Company Branding	Agency logo and colours applied to all client-facing documents.
Vacant Units (Public)	Public listings page for your active properties.
Post to Jiji & Facebook	Marketplace integration for maximum listing reach.
Integrations	Zoho Books, QuickBooks, Odoo, Facebook, and more.

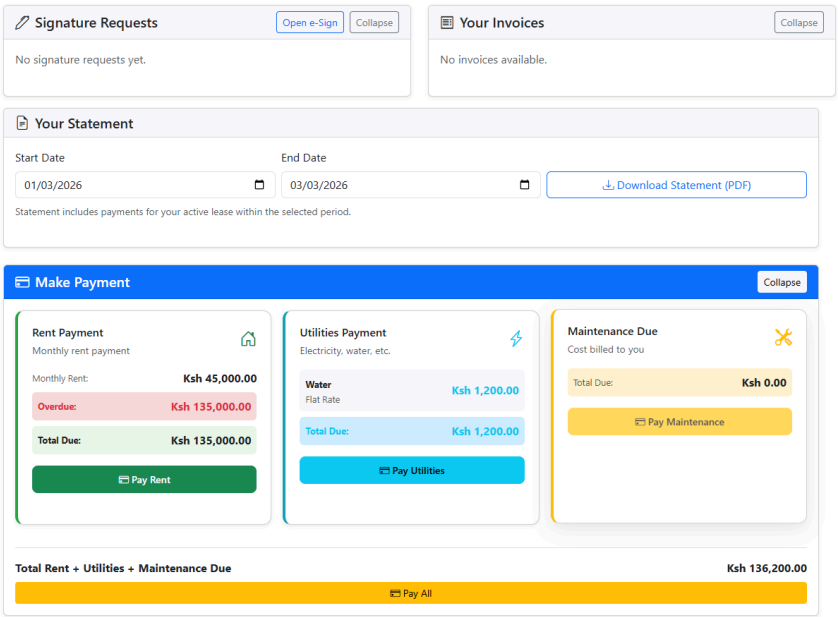
Tenant Self-Service Portal

Empower tenants. Reduce your workload.

The Tenant Portal is a dedicated self-service interface that gives your tenants 24/7 access to their own account — without needing to call you, message you on WhatsApp, or wait for a statement to be prepared.

In practice, the portal eliminates the majority of routine tenant queries. When tenants can see their balance, download their statement, and submit a maintenance request themselves — the number of calls and messages you receive drops dramatically. For a manager with 100 tenants, this can save multiple hours every week.





Feature / Module	What It Does
Live Balance View	Tenants see their real-time account balance the moment they log in — broken down into rent owed, utility charges, and maintenance fees. The balance updates the instant a payment is recorded.
Full Payment History	Every payment the tenant has ever made is visible in chronological order — date, amount, payment method, M-PESA reference (if applicable), and which invoice it was applied to. Completely transparent.
Invoice Access	Tenants can view all invoices raised against their account, see which are paid and which are outstanding, and download any invoice as a PDF.
Statement Download	Tenants can generate and download their own statement for any date range without needing to request it. Statements show all charges, payments, and the running balance in a clean, professional format.

Maintenance Requests	Tenants submit maintenance requests directly from the portal — describing the issue, attaching photos, and specifying urgency. The request appears in your maintenance queue immediately.
Request Status Tracking	Tenants can track the status of their maintenance requests in real time — whether they are pending, assigned, in progress, or completed. Fewer follow-up calls.
Lease Information	Tenants can view their lease start and end dates, monthly rent amount, deposit paid, and any lease terms that apply to them.
Document Access	Any documents shared with the tenant through RentSmart — lease copies, receipts, notices — are accessible from the portal for download.
Secure Login	Each tenant has their own secure login credentials. Access is managed by the landlord or manager — easily activated or deactivated from the tenant profile.
Mobile Optimised	The tenant portal is fully responsive and works on any device. Tenants can manage their account from a smartphone without needing to install anything.

> *Tenants who use the portal are less likely to dispute charges — because they can see the same data you see, in real time. Transparency builds trust and reduces conflict.*

Integrations & Marketplace Connections

Connect RentSmart to the tools you already use

RentSmart does not operate in isolation. It connects to leading accounting platforms, property marketplaces, and social media channels enabling you to reach more tenants, sync your financial data, and manage everything from one central hub.

Accounting Integrations

Feature / Module	What It Does
Zoho Books	Sync income, expenses, and financial data directly with Zoho Books. For businesses that use Zoho as their accounting platform, this eliminates double-entry between your property management and accounting systems.
QuickBooks	Integrate with QuickBooks for automatic financial data sync. Payments recorded in RentSmart flow into QuickBooks, keeping your books up to date without manual export/import.
Odoo ERP	For larger operations that use Odoo ERP, RentSmart can integrate as the property management front-end, feeding data into Odoo's accounting, HR, and CRM modules.

Marketplace & Listing Integrations

Feature / Module	What It Does
Jiji	Post vacant units directly to Jiji.co.ke — Kenya's most popular property classifieds platform — from within RentSmart. No copy-pasting, no separate login. One click to publish.
Facebook	Connect your Facebook account to post property listings to your Facebook page or the Facebook Marketplace, reaching thousands of potential tenants or buyers in your target area.
Marketplaces	Post to multiple online property platforms simultaneously from a single interface, maximising your listing reach and reducing the time spent on marketing activities.

AI Assistant

Feature / Module	What It Does
Built-in AI Assistant	RentSmart includes an AI assistant accessible from any screen. Ask it questions about how to use a feature, request a summary of a tenant's account, or get help with a task — available 24/7 without raising a support ticket.

Pricing Plans

7-day free trial on all plans — no credit card required

RentSmart offers four plans to match every scale of operation. All plans include access to core features, with higher tiers unlocking additional capacity, advanced tools, and priority support.

Starter	Professional	Premium	Enterprise
Ksh 3,500 /mo	**Ksh 7,000 /mo**	**Ksh 15,000 /mo**	**Custom Pricing**
Up to 5 Properties100 Listings	Up to 20 Properties350 Listings	Up to 50 Properties800 Listings	Unlimited PropertiesUnlimited Listings
Individual landlords replacing spreadsheets	Growing property management businesses	Large property managers — full feature suite	Real estate firms & institutional landlords

What Each Plan Includes

Feature / Module	What It Does
Starter — Ksh 3,500/mo	Property & unit profiles, tenant profiles, lease details, manual rent tracking, arrears summaries, maintenance logging, caretaker assignment, staff records, basic expense tracking, tenant portal (balance & statements), document upload, email support.
Professional — Ksh 7,000/mo	Everything in Starter PLUS: partial & advance payment handling, real-time arrears tracking, SMS & email rent reminders, payment confirmation notifications, maintenance task assignment & follow-ups, property-level expense tracking, monthly income & financial reports, Excel & PDF export. Support & Contact

We are here when you need us

The RentSmart team is based in Nairobi and is available across multiple support channels. Support levels vary by plan, with Enterprise clients receiving dedicated account management.

Feature / Module	What It Does
Email Support	rentsmart@timestentechnologies.co.ke — Available on all plans. Typical response within 1 business day.
Phone Support	+254 795 155 230 — Direct line to the support team. Nairobi, Kenya.
WhatsApp Support	Available on Premium and Enterprise plans. Fast, direct support via WhatsApp for urgent queries.
Priority Support	Professional, Premium, and Enterprise subscribers receive prioritised response handling.

Dedicated Account Manager	Enterprise plan clients are assigned a named account manager who understands their specific portfolio and business needs.
Assisted Onboarding	Premium and Enterprise plans include hands-on onboarding: we help you set up your properties, migrate your data, and train your team.
AI Assistant (In-App)	The built-in AI assistant is available 24/7 for instant help with any platform feature — no support ticket required.
Platform Uptime	RentSmart is cloud-hosted with 99%+ uptime, automated backups, and a secure audit trail — so your data is always safe and available.
